Headline: UN climate panel endorses ceiling on global emissions - The Boston Globe  
Date: Sep 30, 2013

STOCKHOLM – The world’s top climate scientists on Friday formally embraced an upper limit on greenhouse gases for the first time, establishing a target level at which humanity must stop spewing the gases into the atmosphere or face irreversible climatic changes. They warned that the target is likely to be exceeded in a matter of decades unless steps are taken soon to reduce emissions. Unveiling the latest U.N. assessment of climate science, the experts cited a litany of changes already underway, warned that they were likely to accelerate and expressed virtual certainty that human activity is the main cause.
