

Communications: Letter sent to the President of MIT from  
Peter Valentine 6/18/2014 37 Brookline St 6/18/2014

TRV 15

Dear President Reif,

Laws need to be created and passed Now before thousands and even possibly millions of people are put out of work by new technologies.

No Work, no Money, no MONEY, Rioting.

Laws have to be passed regarding the unabandoned creation of dangerous things. Such as Gray Goo which has the ability to destroy all matter including the Entire Earth.

It is MITs' duty and responsibility, being at the very heart of TECHNOLOGY, to investigate, elucidate, create and present these VERY SERIOUS MATTERS.

The whole matter, meaning the entirety of turning humans into machines has to be Publically Investigated. Not just quietly conducted in laboratories and offices.

The Presumption of human technology ENDLESSLY without a speck of limitation in every aspect of human life, is a form of technological insanity.

I am in no way suggesting that technology is evil. For it is a divine right of humans to create and invent. But since the forces of evil and oppression do exist, they will grab onto every device they can to twist it into the fulfillment of their disgusting desires.

Two of human Technologies' potential flaws are "MORE and MORE" and "FASTER AND FASTER".

Robots after a certain point can lead to human extinction,

Is the idea of living life in a beautiful way with color, form, texture, Living in peaceful natural environments using our hands and minds making things we really enjoy, slated for extinction to be replaced by mechanical widgets, boxes and buttons. Is our destiny to look upwards and see hundreds of vehicles riding everywhere instead of seeing the mysteries of the night sky and the calm blue of the uplifting open sky. Is it better to be relaxed and strong than nervous and jittery.

STV

I'm not against anything that upholds a sane society. But this whole gargantuan push into technology must be put before an interesting examination for everyone's benefit.

what I've written may not be perfect  
but you get the idea

it's time to do it NOW  
before bad things happen
