| | |
|--------------------|-------------|
| Total DBH | 5137 |
| Average DBH | 13 |

- c. TreeAzin shall be injected into trunk at root flare or as close to root flare as possible.
- d. Contractor shall use 15/64" high helix drill bits for drilling injection holes into tree
 - In order to maintain high efficiency of drill bits, Contractor shall dispose of old 15/64" high helix drill bit after 1000 inch dbh have been drilled with bit
- e. Injection hole shall be 3/4" to 1" inch deep in order to maximize delivery of TreeAzin into tree.
- f. TreeAzin shall be injected into ash trees using the EcoJect System or equivalent injection system per City Arborist's approval.
- g. BioForest will provide the successful proponent, at no charge in 2014, a custom designed EcoJect System (ES). Included with the ES is no charge shipping of ES and components. BioForest will also provide an appropriate number of high helix drill bits at no charge to the successful proponent
 - Contractor at their own expense will be responsible for purchasing and maintaining EcoJect System and components for Year 2 and 3 of contract
- h. Contractor shall be responsible for cleaning injection system on a daily basis to maintain high efficiency.
- i. TreeAzin shall be injected into the ash trees according to the product label.
- j. Contractor shall consult with City Arborist to determine injection rates for each ash tree throughout the City.
 - Ash trees may be injected with the following rates:
 - 5 ml/inch dbh
 - 8 ml/inch dbh
 - 10 ml/inch dbh
 - 12.5 ml/inch dbh
- k. Contractor shall report any ash trees that appear to be in stress and/or decline to City Arborist prior to injection to determine best mitigation plan per tree.

Front cover photos of TreeAzin® treated trees (left) vs. untreated trees (right)
 1. Treated for Emerald Ash Borer in 2008 and 2010, photo taken in 2011, Ontario. 2. Treated for Jack Pine Budworm in 2004, Minnesota.
 3. Treated for Gypsy Moth in 2002, New Brunswick. 4. Treated for Spruce Budworm in 2003, Saskatchewan.

Benefits of Trees

A Large Urban Tree:

- Increases property value significantly
- Acts as a windbreak, reducing heating costs
- Provides shade, reducing cooling costs
- Absorbs rainwater, reducing runoff
- Cleans carbon dioxide and other pollutants from the atmosphere
- Reduces noise pollution
- Adds beauty and grace to any neighborhood

TreeAzin[®] Treatment vs. Removal & Replacement

- Emerald Ash Borer (EAB) is a **non-native** pest that attacks and kills all native species of True Ash, not Mountain Ash.
- TreeAzin[®] Systemic Insecticide (EPA Reg No. 82996-1) effectively controls EAB.
- TreeAzin[®] treatment almost always costs less than tree removal, disposal, and replanting.
- Newly planted trees can take approximately 30 years to begin providing maximum benefits.

WARNING: Even a healthy looking Ash tree may be infested with Emerald Ash Borer

Emerald Ash Borer Facts

Emerald Ash Borer (EAB):

- Is a **non-native** pest, discovered in 2002 in Detroit and Windsor
- Attacks all native species of True Ash, not Mountain Ash
- Kills True Ash of any size or age, even healthy trees
- **Beetles** feed on leaves from June to August
- **Larvae** feed on inner bark, cutting off water and nutrient flow
- Spreads naturally and by people moving Ash firewood, trees, or wood with bark attached

Emerald Ash Borer Signs and Symptoms:

- Tree **crown thins** until bare
- **Shoots grow** from roots and trunk
- **Bark splits** creating vertical cracks
- EAB beetles emerge from tree, forming **D-shaped exit holes**
- Larvae feed under bark, forming **S-shaped feeding galleries**
- **Woodpecker feeding** activity increases, creating large holes

WARNING: EAB infested Ash trees may not initially show signs or symptoms

Emerald Ash Borer Protection

- TreeAzin® Systemic Insecticide (EPA Reg No. 82996-1) effectively controls EAB.
- TreeAzin® can prevent EAB damage in healthy Ash trees and prevent further damage in attacked Ash trees, if damage is not yet too severe.
- Ash trees may already be infested, even if EAB signs and symptoms are **not** evident.
- **Do Not Delay** – have your Ash tree assessed by a qualified arborist as soon as possible.
- If your Ash tree is within 15 miles of a known EAB infestation, begin TreeAzin® treatment **immediately at the maximum dose**.
- Visit TreeAzin.com for more information on having your tree assessed and treated.
- Treating an Ash tree with TreeAzin® significantly improves its chance of survival – an untreated Ash will almost certainly die.

TREEAZIN[®] SYSTEMIC INSECTICIDE[®]

Trees Saving Trees[™]

An Insecticide to Control Emerald Ash Borer

- Developed by the Canadian Forest Service in collaboration with BioForest Technologies Inc.
- Produced from Neem tree seed extracts.
- TreeAzin[®] is **not** Neem oil.
- Injected directly into trees by licensed pesticide applicators.
- Scheduled as a "Less or Least Hazardous" commercial pesticide by the Ontario Ministry of Environment (MOE).
- Registered as a bioinsecticide by the U.S. Environmental Protection Agency (EPA).
- Listed for use in organic crops by the Organic Materials Review Institute (OMRI).
- Scheduled as a "Less or Least Hazardous" commercial pesticide by the Ontario Ministry of Environment (MOE).

Neem tree leaf

TreeAzin[®] injected directly into Ash trees

Effective and Appropriate for the Urban Setting

- TreeAzin[®] Systemic Insecticide (EPA Reg No. 82996-1) effectively controls EAB.
- TreeAzin[®] is taken-up rapidly throughout the tree and remains in the tree at effective levels throughout the summer.
- TreeAzin[®] degrades naturally within tree tissues.
- TreeAzin[®] provides up to **2 years protection** against EAB*.
- When applied at **maximum dose**, TreeAzin[®]:
 - kills greater than 95% of EAB larvae
 - significantly reduces the number of eggs laid and most eggs laid are not viable
- When used as labeled, TreeAzin[®] poses minimal risk to:
 - applicators, bystanders, and pets
 - bees, birds, and mammals
 - soil and aquatic ecosystems

* 2-year protection may depend on tree health and EAB populations at the time of injection

Having Your Tree Treated

- TreeAzin® can **only** be injected by licensed pesticide applicators.
- **Do Not Delay** – have your Ash tree assessed by a qualified arborist as soon as possible.
- Visit TreeAzin.com for more information on having your tree assessed and treated.
- Obtain **multiple quotes**.
- Follow these **3 simple steps** before obtaining EAB treatment quotes.

STEP 1: Confirm your tree is a True Ash

- EAB attacks and kills all native True Ash trees.
- Mountain Ash trees are not True Ash trees.
- True Ash:
 - Medium to large trees
 - Compound leaves, typically having 7 to 9 leaflets
 - Paddle-shaped seeds
- Mountain Ash:
 - Small trees or bushes
 - Compound leaves, typically having 13 to 17 leaflets
 - Clusters of red berries in Fall

STEP 2: Determine your tree size

- Using a measuring tape, measure the circumference of the main trunk in inches at chest height.
- Chest height is 4.5 feet above ground.
- To calculate your tree's diameter, multiply your tree's circumference in inches by 0.3183.

$$\frac{\text{Tree circumference (inches)}}{\text{Conversion factor}} \times 0.3183 = \text{Tree diameter (inches)}$$

STEP 3: Know the recommended TreeAzin® dose

- Your Ash tree may already be infested, even if EAB signs and symptoms are **not** evident.
- If your Ash tree is within 15 miles of a known EAB infestation, begin treatment immediately at the **maximum TreeAzin® dose** (12.5 mL / inch tree diameter).
- If your Ash tree is greater than 15 miles from a known EAB infestation, a **preventative TreeAzin® dose** may be recommended (5-10 mL / inch tree diameter).
- Go to aphis.usda.gov to learn where EAB has been found.

TREEAZIN

Dose Chart
 Where is your Ash Tree in Relation to Known EAB Infestations?

Outside 15 miles
Preventative Dose
5-10 mL / inch

Inside 15 miles
Maximum Dose
12.5 mL / inch

Other Insect Pests

- In addition to Emerald Ash Borer, TreeAzin® Systemic Insecticide (EPA Reg No. 82996-1) is registered in United States for the following insect pests:

Hemlock Woolly Adelgid

- Non-native insect pest that attacks all species of hemlock, but eastern and Carolina hemlock are particularly vulnerable when attacked.
- Inject trees with an 8 mL/inch dose of TreeAzin® when damage is expected.

Gypsy Moth

- Non-native insect pest that attacks deciduous and coniferous trees.
- Inject trees with an 8 mL/inch dose of TreeAzin® when defoliation is expected.

Tent Caterpillars

- Native insect pests that attack deciduous trees.
- Inject trees with an 8 mL/inch dose of TreeAzin® when defoliation is expected.

Budworms

- Native insect pests that attack coniferous trees.
- Inject trees with an 8 mL/inch dose of TreeAzin® when defoliation is expected.

Leafminers

- Native insect pests that attack cedar trees, bushes and hedges.
- Inject trees with an 8 mL/inch dose of TreeAzin® when defoliation is expected.

Sawflies

- Many Sawflies, like Yellowheaded Spruce Sawfly, are Native and non-native insect pests that attack deciduous and coniferous trees.
- While its name may be misleading, Birch Leafminer is a Sawfly
- Inject trees with an 5 mL/inch dose of TreeAzin® when defoliation is expected.

Elm Leaf Beetle

- Non-native insect pest that feeds on the leaves of elm.
- Inject trees with an 8 mL/inch dose of TreeAzin® when damage is expected.

Since 1996, BioForest Technologies Inc. has kept forests healthy with scientific and technical expertise. The Company specializes in innovative product development and forest protection strategies.

TreeAzin® Systemic Insecticide was developed for treating threatened trees in urban forests and ecologically sensitive areas.

Please visit TreeAzin.com to learn more about TreeAzin® and how to protect your trees.

TREEAZIN
Treated

“ There was an average of 10-12 larvae per m² of phloem in the 2012 winter on TreeAzin trees treated only in 2011. That's pretty low – you would not see the canopies declining on trees with that density of larvae.

Dr. Deb McCullough
Michigan State University (MSU)

EAB Infested
Non Treated

TREEAZIN[®] SYSTEMIC INSECTICIDE

Michigan State University (MSU): Independent Study of 2-year Emerald Ash Borer (EAB) Control with TreeAzin[®] 2011-2012

Dr. Deb McCullough of MSU conducted an independent study on the 2-year efficacy of TreeAzin[®] Systemic Insecticide for EAB control in 2011 and 2012. In the study, conducted near East Lansing, Michigan, Dr. McCullough sampled 24 trees from three forested sites, each with a DBH between five and 13 inches. All trees were felled in winter 2012-2013 and debarked from the base to the upper canopy to determine live larval density per m² of phloem tissue. Trees treated only in 2011 with TreeAzin had an average of just 10-12 larvae per m², which was significantly less than the 60-62 larvae per m² on untreated trees.

Trees Treated 2011 Only
Live Larvae Per m²

Environmental Impacts

Here are some questions to ask before choosing a pesticide:

Is there an effect on bees?

On the relationship between pesticide use and bee colony collapse, TreeAzin has been found to have low toxicity to bees. TreeAzin is not in the neonicotinoid or avermectin classes of insecticides.

Will leaves from a treated tree affect aquatic or terrestrial environments?

According to Dr. David Kreutzweiser et al. (2011)¹, "no significant reductions were detected among earthworm survival, leaf consumption rates, growth rates, or cocoon production, aquatic insect survival and leaf consumption rates, and among terrestrial and aquatic microbial decomposition of leaf material in comparison to controls."

Don't forget that the leaves from treated trees end up falling into streams and storm water areas. TreeAzin is safe for these environments since it is not a persistent product.

(Continued)

“ When azadirachtin (TreeAzin) is used as a systemic insecticide in trees for control of insect pests such as the invasive wood-boring beetle, emerald ash borer, resultant foliar concentrations in senescent leaf material are likely to pose little risk of harm to decomposer invertebrates.

Dr. David Kreutzweiser
Canadian Forest Service

Long Term Efficacy of TreeAzin

In 2013, a survey was conducted on 727 treated and untreated ash in a Canadian municipality that started using TreeAzin in 2008.

Environmental Impacts

Can a child play in the leaves from a treated tree? Can a homeowner compost leaves from a treated tree and use them in their garden?

Essentially all of the active ingredient in TreeAzin has dissipated from the leaf tissue before senescence in the fall. According to Grimalt et al. (2011)², this indicates an exceedingly low potential for non-target effects. It is safe for a child to play in the leaves, or for leaves to be composted and used in a garden.

Is there a risk of exposure when in proximity to sawdust from a treated tree? How long does the product persist in the tree?

According to Grimalt et al. (2011)², residues from TreeAzin dissipate quickly in the tree after reaching peak levels 48 hours after injection. Within 44 days after treatment, over 90% of the total azadirachtin residues have dissipated. Pruning and removals typically begin several months after treatment; there is no more risk to the worker in cutting a treated tree than an untreated tree.

While tree injections reduce the risk of exposure compared to basal spraying or soil drenching, it's also important to consider how the product persists in the environment and its long-term effects on non-targets and bystanders.

- 1% mortality in treated trees.

- 94% of the treated trees were healthy (no sign of EAB), or in good health.

- 47% of the untreated trees were dead or in decline.

“ Waiting several years to commence treatment of a city's EAB infestation with any product will result in moderate to poor efficacy. Treating early is key, and as such, a municipality's decisions at the early stages of an EAB outbreak will determine the program's success. Municipalities will see great results with the appropriately timed usage of TreeAzin.

John McNeil – Manager, Forestry Services, Parks and Open Spaces, Town of Oakville, Canada

Condition of Treated Trees | 2013

Condition of Untreated Trees | 2013

Affordability of Treatment

TreeAzin treatment almost always costs less than the cost of tree removal, disposal and replanting, and is competitive with other treatment options, without sacrificing environmental safety. Additionally, utilizing BioForest's EcoJect[®] injection system allows for multiple, simultaneous tree injections, yielding industry leading high volume efficiencies and scalability in larger treatment programs.

Although Emerald Ash Borer is a devastating invasive insect that attacks and kills all species of True Ash, not all ash trees need to be removed. According to the *Society of Municipal Arborists*, an ash conservation strategy is preferred over removal of all trees. Communities who remove all ash trees may take decades to recover financially and ecologically. The synergy created when using TreeAzin in combination with the EcoJect System provides an efficient and affordable means to save trees.

TREEAZIN[®] SYSTEMIC INSECTICIDE

Injection Dosage Chart

12.5 ml/in. dbh treatments should begin immediately on trees, with or without suspicious EAB symptoms, within 15 miles of a known infestation. Delaying treatment could compromise treatment effectiveness and kill trees.

- Suspicious EAB symptoms include:
- Premature foliage yellowing
 - Canopy thinning
 - Dead branches
 - Heavy seeding
 - Epicormic shoots on main stem and/or major canopy branches
 - Woodpecker and/or Squirrel feeding
 - Bark cracks

If D-shaped exit holes or S-shaped galleries are present, move the tree to the EAB infested category. When treating any tree with greater than 30% canopy thinning and/or dieback, the tree owner should be advised that tree condition may compromise treatment effectiveness.

For information on known EAB infestations, visit: http://www.aphis.usda.gov/plant_health/plant_pest_info/emerald_ash_b/index.shtml

These are dosage guidelines for applicators. Always read the TreeAzin[®] Systemic Insecticide label before applying.

* Tree condition may compromise treatment effectiveness

Notes for Determining Canopy Thinning and/or Dieback

- A healthy ash tree has a fully foliated canopy.
- A healthy ash canopy may be thinner than canopies of other tree species, such as maple.
- A thinning ash canopy does not have as many leaves as there ought to be, but all top branches exposed to sunlight have leaves.
- An ash canopy with dieback has branches, exposed to sunlight, that are dead (have no leaves or new buds). Lower branches, not exposed to sunlight, may die naturally and should not be considered.
- ≥30% canopy thinning and/or dieback occurs when the combined effects of thinning and dieback result in ≥30% of the leaves that a healthy tree would have to be missing.
- When treating any tree with ≥30% canopy thinning and/or dieback, the tree owner should be advised that tree condition may compromise treatment effectiveness.
- See reverse for more photos of canopy thinning and/or dieback.
